

# IT SOLUTION ARCHITECTURE & DESIGN DATASHEET

## SERVICE DESCRIPTION:

The CACI Network Services consulting team has expertise in a full range of solution architecture and design activities. We have experience in completing complex and industry-leading projects for a variety of clients.

Our consultants are high-calibre, experienced and versatile. They have expertise in business analysis, business process analysis and data architecture as well as deep experience in solution architecture and design. This broad approach means that we can ensure that your people, processes and systems work together to meet your business objectives.

We can tailor our solution architecture and design services to your requirements. The following are typical services we have performed for customers:

- Analyse business requirements in order to define it requirements
- Document and assess as-is systems landscape, analyse business pain points and recommend best-practice architecture improvements to achieve business benefits
- Define solution architecture, either end-to-end or for individual platforms
- Analyse as-is data architecture and data integrity issues and recommend architecture improvements
- Define to-be data architecture
- Define architecture roadmaps to support business transformation programmes
- Define target architectures and transition architectures
- Assist in production of architecture and solution requirements for RFPs
- High level design activities, either end-to-end or for individual platforms
- Assess vendor RFP responses, providing an independent view of architectural and functional compliance

## KEY FEATURES

- We are a specialist UK-based consultancy, offering continuity of high calibre, highly experienced consultants
- We provide better value for money than commodity offshore resources
- We provide better value and a more personal approach than the large system integrators
- We provide continuity of top-quality consultants, unlike some system integrators who provide top consultants to win the business and later replace them with more junior staff
- Our vendor-neutral approach means that we are focused on offering the right solution for the customer rather than the supplier

## KEY BENEFITS

- We provide Business Process Services and the SME resources to manage your business requirement inputs to transform your business
- We will resource, support or enhance your IT RFI & RFP activities
- We provide Delivery Assurance for the technical governance of your IT activities so you know you are covered
- We provide Delivery Assurance Service to assist in the scope and build of any proposed solution
- We offer services ranging from advisory to the development of process or system designs. These can increase operational efficiencies and improve your deployment speeds and accuracy while reducing ongoing costs
- We will provide the right people to work closely alongside you to investigate issues, audit current environments and find the solutions to any challenges you might face

Our services can be delivered at a Gold, Silver or Bronze level depending on your need.

**CACI**

## WHAT CAN WE PROVIDE YOU?

**CACI Network Services has great experience covering the wide spectrum of software and infrastructure that you may have in place in your environment.**

**Our experience and independence means that we can offer these services to you without being restricted to a specific type of software or infrastructure.**

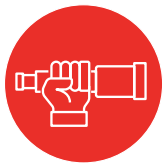

In order to deliver the services shown above, our solution architects will work closely with your organisation and:

Collaborate with stakeholders to understand business goals

Gain a clear focus on delivering business outcomes and business benefits

Collaborate with Enterprise Architects to ensure solution architectures are in alignment with the overall EA principles and technology strategy of the business

Follow best practice, e.g. TM Forum Framework (TAM, eTOM, SID) and Open Digital Architecture.

Collaborate with other Architects, Programme and Project managers to successfully deliver programme streams and individual projects

**FLEXIBLE SOLUTIONS THAT MATCH YOUR BUSINESS NEEDS**
